

HEART FAILURE

Estimated Time: 60 minutes

Scan to Begin

Patient Name: Henry Foster

CASE STUDY OVERVIEW

Henry Foster is a 62-year-old male patient who was just discharged from the hospital following an exacerbation end-stage heart failure and COPD. He also has cellulitis in his right lower extremity and multiple other comorbidities. At the beginning of this case study, he presents a copy of his insurance card and discharge prescription orders to a retail pharmacy to be filled. Students must correctly gather these prescriptions from the shelves of the ARISE Virtual Pharmacy. Once completed, they see a video of the patient who is shocked and angry at the cost of these medications. Students must choose how to respond.

LEARNING OBJECTIVES

1. Follow established state and federal regulations for the dispensing of medications from a retail pharmacy
2. Review customer discharge medication orders and insurance information for accuracy
3. Accurately fill prescription medication orders
4. Demonstrate professional behavior during all interactions

CURRICULUM MAPPING

WTCS PHARMACY TECHNICIAN PROGRAM OUTCOMES

- Demonstrate personal/interpersonal knowledge and skills in the practice of pharmacy
- Demonstrate foundational professional knowledge and skills for the practice of pharmacy
- Prepare prescriptions/medication orders and pharmaceutical products for dispensing, distribution, and disposal
- Compound sterile and nonsterile medications
- Follow established policies and procedures for procurement, billing, reimbursement, and inventory management
- Utilize pharmacy technology and informatics
- Adhere to state and federal regulations governing the practice of pharmacy
- Apply the principles of quality assurance to the practice of pharmacy

FACILITATOR INSTRUCTIONS

This case study was designed as an interactive classroom or group experience and should be facilitator lead. While students can do many of the activities individually or in small groups, you should be aware that throughout the simulation some QR codes are necessary to the programming of the iPad content. Directions for which QR codes are required are listed in the documentation below. The QR codes are also in **BOLD** type.

Level tab – This tab “tells” the content in the iPad to change to what is needed for the next state of a simulation.

Medication QR Codes – All medications on the discharge orders are scannable – see QR Codes listed above. When a medication scanned, students see a realistic medication label as well as a hyperlink that will take them to DailyMed, a medication reference housed by the National Library of Medicine. There they can review up-to-date medication content, labels, and package insert information.

TEACHING PLAN

STATE 1

iPad Prompts		Facilitator Prompts & Discussion Points
1.	Explain how the iPad works and the general instructions for this case study.	<ul style="list-style-type: none"> See “Facilitator Instructions” above
2.	Scan the start code.	
3.	View the “Meet Your Patient” plaque	<ul style="list-style-type: none"> This is an image of our “patient” for this case study.
4.	Discuss the “Learning Objective(s)”	<p>LEARNING OBJECTIVES</p> <ol style="list-style-type: none"> Follow established state and federal regulations for the dispensing of medications from a retail pharmacy Review customer discharge prescription medication orders and insurance information for accuracy Accurately fill retail prescription medication order Demonstrate professional behavior during all interactions
5.	View “Patient” video	<p>POSSIBLE DISCUSSION POINTS</p> <ul style="list-style-type: none"> What are your priorities for this customer? Discuss established policies and procedures for an initial customer interaction at a retail pharmacy.

<p>6.</p>	<p>View the Discharge Orders</p>	<ul style="list-style-type: none"> • Tap continue after the patient video. The customer’s Discharge Orders are located under the Discharge Orders tab or a printable version is located in Appendix A. Facilitator Note: Printed copies may be helpful when students are retrieving medications from the ARISE Virtual Pharmacy shelves. <p>POSSIBLE DISCUSSION POINTS</p> <ul style="list-style-type: none"> • Review the orders for accuracy. <ul style="list-style-type: none"> ○ Do you have any concerns? If so, what are they? • Discuss the customer information that should be included in a pharmacy database. • Discuss items that can only be addressed by a Pharmacist. • Discuss the OTC medications that are listed on the Discharge Orders.
<p>7.</p>	<p>View the Insurance Card</p>	<ul style="list-style-type: none"> • The customer’s insurance card is displayed under the Insurance Card tab or a printable version is located in Appendix B. <p>POSSIBLE DISCUSSION POINTS</p> <ul style="list-style-type: none"> • Review the insurance information for accuracy. <ul style="list-style-type: none"> ○ Do you have any concerns? If so, what are they? • Discuss potential insurance-related complications as well as solutions for those issues. • Discuss what may be different if the patient had Medicare or Medicaid.
<p>8.</p>	<p>To advance the iPad to State 2, use the Scanner tab to scan QR Code: Facilitator.</p>	 <ul style="list-style-type: none"> • After QR Code: Facilitator is scanned, students will receive a message that reads, “You have been approved to proceed.”

STATE 2

iPad Prompts		Facilitator Prompts & Discussion Points
9.	Fill the Medication Order	<ul style="list-style-type: none"> The iPad displays a plaque that reads, “Please fill this medication order from the shelves of the ARISE Virtual Pharmacy.” When students tap continue, the iPad automatically advances to the shelves of the ARISE Virtual Pharmacy.
10.	Select ordered medications from the shelves of the ARISE Virtual Pharmacy	<ul style="list-style-type: none"> Students are to fill the medication orders using the patient’s “Discharge Orders” and the shelves of the ARISE Virtual Pharmacy. Note: The shelves do not include OTC medications. In addition, the ARISE Virtual Pharmacy can be accessed at any time during the scenario using the Virtual Pharmacy tab. The shelves are “hot spots.” By tapping on a shelf, students will see all of the available medications. Tapping on a medication within a shelf, will tell the iPad to add that medication to the pharmacy order. Each shelf must be 100% correct before those medications will be added to the order. Students cannot select some of the required medications from the first shelf, go to another shelf, and then go back to the first shelf to add more medications. Students can leave a shelf and come back to it later, but nothing is saved. When students tap on a medication and then tap “Add,” the iPad will give instructions. If an incorrect amount of medications was selected (ie: a shelf has 3 medications needed for the order and the student only selects 2 of the 3 medications), the iPad reads, “<i>You have selected an incorrect amount of medications. TRY AGAIN.</i>” If the correct number of medications was selected, but the medications are wrong, the iPad reads, “<i>You have selected one or more incorrect medications to add to the order. TRY AGAIN.</i>” When students select BOTH the correct amount of medications and the exact medications required from the Discharge Orders, the iPad reads, “<i>You have added the selected medication(s) to the order. CONTINUE.</i>” Then, students should tap the Home button to continue to other shelves. Note: Students must have each shelf completely correct before the medications are added to the order. The iPad will

not add medication from a shelf that is only partially correct.

- The “Controlled Substance” shelf requires approval before students can select the required medications. When students tap on that shelf, the iPad reads, “*You need permission from the Pharmacist to access this area. Please see your Facilitator. CONTINUE.*” After **QR Code: Pharmacist** is scanned, students can enter that shelf and select the required medications. See Discussion Topics and Questions below.

- QR Code: Pharmacist

- Note: Coumadin is ordered at 3 mg, but only 1 m tablets are available in the pharmacy. A Testosterone patch is ordered, but only Androderm is available in the pharmacy. See Discussion Topics and Questions below.
- Students can view the medications added to the order by tapping the “View Added Medications” button located at the bottom of the ARISE Pharmacy Home screen. This will allow them to check the current order against the Discharge Orders at any time during the selection process.
- Students can look up the medications in each shelf by tapping on the “Medication Reference Website” button located on the bottom of the screen in each shelf. This will take students to the DailyMed website. To reenter the ARISE Virtual Pharmacy, students must tap the Virtual Pharmacy tab.
- When students think they have added all of the correct medications to the order, they should tap the “Verify Selections” button located at the bottom of the ARISE Pharmacy Home screen. If the order is wrong, the iPad reads, “*One or more of your selections was incorrect, please try again. CONTINUE.*” When the order is correct, the iPad reads, “*The ARISE Pharmacist has verified your order is correct. You will progress automatically in a moment.*”

- **Facilitator Note:** The correct medications located on each of the ARISE Virtual Pharmacy shelves are located in Appendix D.
- **Facilitator Note:** You can advance the scenario to State 3 at any time by scanning QR Code Facilitator. This will bypass the ARISE Virtual Pharmacy and show the “Completed Medication Order” which is the Beginning of State 3.

POSSIBLE DISCUSSION POINTS

- Discuss state and federal regulations as well as policies & procedures related to Controlled substances.
- Discuss the Coumadin and Testosterone orders.
 - How do you fill medications that are not available in the pharmacy as the order is written?
- Discuss potential insurance-related complications as well as solutions for those issues.

STATE 3

iPad Prompts	Facilitator Prompts & Discussion Points
<p>11. Review the “Completed Medication Order”</p>	<ul style="list-style-type: none"> • A “Completed Medication Order” is displayed on the iPad and a printable version of the Completed Medication Order is located in Appendix C. • Facilitator Note: This order shows the OTC medications that are still needed. <p>POSSIBLE DISCUSSION POINTS</p> <ul style="list-style-type: none"> • Discuss the label and instructions needed for the Coumadin order. • Discuss DAW codes and relate that to the Androderm for Testosterone substitution. • Discuss policies & procedures related to assisting customers with OTC medications.
<p>12. View “Patient” video</p>	<ul style="list-style-type: none"> • This is a video of the patient reacting to the cost and number of medications he was prescribed. • When students tap continue, a multiple-choice question follows.
<p>13. Review multiple choice question & answers</p>	<ul style="list-style-type: none"> • Question: How should you respond to this customer? Please select the most correct response. <ul style="list-style-type: none"> ○ Response A: Ask the Pharmacist to assist with the customer. ○ Response B: Explain that the medications are prescribed by his Provider and that they are all necessary. ○ Response C: Offer him advice on how to get discounted medications. ○ Response D: All of the above are correct. Note: This is the correct answer and students will receive a message that reads, “Scenario objectives have been met. You may exit the scenario.” <p>POSSIBLE DISCUSSION POINTS</p> <ul style="list-style-type: none"> • Discuss all of the answers above and give rationale as to how all are correct according to national standards.

14. End Scenario

- Students can exit at any time by tapping the Exit tab and following instructions.
- Please have each student complete the provided survey.

SURVEY

Print this page and provide to students.

Students, please complete a brief (2-3 minute) survey regarding your experience with this ARISE simulation. There are two options:

1. Use QR Code: Survey
 - a. Note: You will need to download a QR Code reader/scanner onto your own device (smartphone or tablet). There are multiple free scanner apps available for both Android and Apple devices from the app store.
 - b. This QR Code will not work in the ARIS app.

5. Copy and paste the following survey link into your browser.
 - a. https://ircvtc.co1.qualtrics.com/SE/?SID=SV_6Mwfv98ShBfRnBX
